PICK Chart

John W. Moran\textsuperscript{1} and Brynn Riley\textsuperscript{2}

June 27, 2014

Description: A PICK chart is used to rank projects by considering their level of difficulty (amount of scarce resources required) and the level of payoff (the improvement gain). The PICK Chart is divided into four quadrants representing four potential difficulty/payoff possibilities for an improvement team to consider. The PICK chart was originally developed by Lockheed Martin for organizing process improvement ideas and categorizing them during the Identify and Prioritize Opportunities Phase of a Lean Six Sigma project.\textsuperscript{3} PICK stands for Possible, Implement, Challenge, and Kill. It is a visual tool for organizing ideas and making decisions. PICK charts are useful for focusing improvement team discussions and achieving consensus on which are the best solutions to implement to solve a problem.

When To Use: The PICK chart is used after an improvement team has completed a Solution and Effect Diagram\textsuperscript{4} to help them categorize and choose among solutions to a problem. The PICK Chart helps the team organize and identify which ideas can be implemented easily and have a high payoff and which ideas should not be considered. It allows the team to consider all the possible factors that would contribute to the success of the project. For example:

- Scope of control
- Scope of influence
- Cost
- Time
- Staff availability
- Available data
- Ease of gathering data

The PICK Chart categorizes the brainstormed solution ideas into 4 categories – Possible, Implement, Challenge, and Kill.

Construction Steps:

\textsuperscript{1} John W. Moran, Ph.D. is a Senior Quality Advisor to the Public Health Foundation and a Senior Fellow at the University of Minnesota, School of Public Health in the Division of Health Policy and Management. He is a member of PHAB’s Evaluation and Quality Improvement Committee and Adjunct Professor in the Arizona State University College of Health Solutions’ School for the Science of Health.

\textsuperscript{2} Brynn Riley, MS, CQIA, CHE is a Researcher at the University of Southern Maine’s Muskie School of Public Service and is the representing Performance Improvement Manager for the State of Maine’s Public Health Department. She has over 15 years of experience in project management and process improvement practices in the private sector. She is a certified Green Belt and is an ASQ Certified Quality Improvement Associate, and is a PHF Quality Expert.

\textsuperscript{3} http://en.wikipedia.org/wiki/Pick_chart

1. Brainstorm potential solutions to a problem and complete a Solution and Effect Diagram
2. Draw a 2x2 L-shaped matrix
3. Label the vertical axis *Payoff (Low – High)* and the horizontal axis *Difficulty (Easy – Hard)*
4. Write each potential solution on a Post-It® Note
5. Place each potential solution in the appropriate quadrant in the 2x2 Matrix
   - Possible (Lower Left Quadrant) - ideas that are easy to implement but have a low payoff.
   - Implement (Upper Left Quadrant) - ideas that are easy to implement and have a high payoff.
   - Challenge (Upper Right Quadrant) - ideas that are hard to implement and high payoff.
   - Kill (Lower Right Quadrant) - ideas that are hard to implement and have low payoff.
6. Once each of the potential solutions has been placed in the appropriate quadrant, it becomes easier for the improvement team to visually see where to focus their efforts. Now the team can decide on which solution to trial and determine whether they can achieve the improvement goal.
